

Fw: Portland Harbor Calculated Whole Body Tissue Concentrations

Elizabeth Allen to: POULSEN Mike, PETERSON Jenn L

I haven't yet looked at this. I just had a long discussion with Joe about it. He seems to think that using the average of the individual weight fractions per fish is better for eco, because eco wants to know the conc in individual fish. I'm not convinced that, even if that is true, that such a calculation is mathematically correct, given that the actual measured concentration is based on the combined composites. My head is spinning...

Subject: RE: Portland Harbor Calculated Whole Body Tissue Concentrations

Hi Elizabeth,

Attached are the tissue data you requested for the fish collected during the Round 3b sampling event.

A description of the method used to combine the analytical data on a weighted-average basis for the draft BHHRA can be found in Section 2.6.1. of Attachment F2 of the draft BHHRA report. Please let me know if you have any further questions.

Thanks,
Cindy
